

JONAS NIM RØSSUM

Full-stack software engineer
with strong frontend expertise

SUMMARY

Full-stack software engineer with strong frontend expertise in TypeScript/React. I build polished products end to end, turning complex technical requirements into intuitive, reliable software.

EXPERIENCE

Open Source Maintainer

2022 — Present

Git Truck

- Lead developer and maintainer of Git Truck, an open-source developer tool for software visualization and Git repository analysis.
- Maintain the TypeScript/React architecture for contributor analysis, temporal filtering, repository exploration, and data-heavy D3/DuckDB visualization workflows.
- Migrated from Remix v2 and styled-components to React Router v7, Tailwind CSS v4, Bun, Vite tooling, improving data loading, UI consistency, and longevity of the codebase.

Software Developer

2022 — 2023

twoday IT Minds

- Built React/TypeScript internal tools, uptime dashboards, and operational interfaces for PensionDanmark, improving visibility into system status.
- Delivered frontend and full-stack features across dashboards, advisory tools, and backend integrations in close collaboration with client and cross-functional teams.

Software Developer

2016 — 2019

Dansk Drone Kompagni ApS

- Built full-stack B2B geospatial products with React, TypeScript, Material Design, and .NET/C#, including drone-captured site data, measurements, reporting, and inspection workflows.
- Integrated serverless processing for map analysis, data exports, and PDF report generation, turning large spatial datasets into practical tools for professional users.
- Owned features end-to-end across requirements, architecture, frontend, backend, release delivery, and client feedback in a small product-focused team.

SELECTED PROJECTS

Git Truck

2022 — Present

Open Source

- Open-source TypeScript/React tool for visualizing Git repository evolution, contributor activity, and codebase structure.
- Combines Git data processing, DuckDB-backed analysis, and D3 visualizations for interactive exploration of large repositories.

Speech & Dialogue Systems

2024

Erasmus Exchange Project

- Built end-to-end voice interaction prototypes connecting STT, dialogue management, TTS, and speech APIs including ElevenLabs.
- Addressed real-time voice interface constraints including latency, turn-taking, interruption handling, and robustness to recognition errors in product-like conversational flows.

EDUCATION

MSc Computer Science

2023 — 2026

IT University of Copenhagen

- Focused on software visualization and machine learning.

BSc Software Development

2019 — 2023

IT University of Copenhagen

- Focused on software evolution, maintenance, DevOps, and application development.
